Number of songs in my library

Genre-distribution of songs in my library

The above plots summarize the metadata of the ∼2000 songs currently in my library. The **top** shows the number of songs by year of original release. The **bottom** shows the proportions of songs with various genre keywords: e.g. "roll" corresponds to "rock & roll" and "hard" corresonds to "hard rock." The thickness of the patches of color indicate the relative prevalence of that genre, as a percentage of the total number of songs.
